## CE 306 Midterm Exam

QUESTION 1	2 points	✓ Saved
Applications use connection-oriented protocol for faster data delivery		
○ True		
False		
QUESTION 2	10 points	✓ Saved
The principle characteristics of connectionless service are		
A. No guarantees of reliable data transfer		
B. All of the above		
○ C. No handshaking		
O. D. No data integrity control		
○ E. No flow control or congestion		
QUESTION 3	2 points	✓ Saved
Fragmentation is used to regulate MTU		
® True		
○ False		
QUESTION 4	2 points	✓ Saved
Go-Back-N is a type of piplined protocol designed for reliable data transport		
True		
○ False		
QUESTION 5	2 ! 4	
TCP uses multiplexing/demultiplexing, since UDP must work faster it does not use multiplexing/demultiplexing,	2 points	✓ Saved
Ter uses manuprexing demaniprexing, since our mast work taster it does not use manuprexing demaniprexing.  True  True		
© False		
QUESTION 6	2 points	✓ Saved
TCP header contains fragment ID  O True		
False		
QUESTION 7	2 points	✓ Saved
Before the data transmission UDP establishes connection with destination host.		
O True		
False		
QUESTION 8	2 points	✓ Saved
IEEE defines the maximum transferable unit (MTU) size as 1400 bytes		
○ True		
● False		
QUESTION 9	2 points	✓ Saved
TCP Uses port numbers to specify destination and source hosts		
○ True		
® False		
QUESTION 10	2 points	. / Count
	2 points	✓ Saved
JDP is much faster than the TCP  True		
○ False		
QUESTION 11	2 points	✓ Saved
TCP uses 16-bit sequence numbers for identifying TCP segments		
○ True		
False		

	2 points
TCP uses ACKs for verifying the receipt of packets	
® True	
○ False	
QUESTION 13	2 points
	2 points
UDP is residing in the same layer as of DHCP	
© True	
○ False	
QUESTION 14	2 points
	2 points
The IP checksum includes the TTL	
○ True	
False	
QUESTION 15	2 points
	2 points
UDP has no SYN and ACK flags	
True False	
QUESTION 16	2 points
Length of the IP fragment offset is 13 bytes	
○ True	
False	
QUESTION 17	2 points
	2 points
IP uses TTL for limiting packets lifetime through Internet	
True	
○ False	
QUESTION 18	2 points
UDP uses Polynomial Checksum for detecting multiple bit errors	
True	
© False	
QUESTION 19	10 points
Flow control is the mechanism to regulate the flow of data, so that a fast host cannot overrun a slow one. This is the function of the following TCP/IP Layer	
A. Transport Layer	
○ B. All layers	
O B. All layers C. Application Layer	
<ul><li>○ B. All layers</li><li>○ C. Application Layer</li><li>○ D. Physical Layer</li></ul>	
O B. All layers C. Application Layer	
<ul><li>○ B. All layers</li><li>○ C. Application Layer</li><li>○ D. Physical Layer</li></ul>	2 points
○ B. All layers ○ C. Application Layer ○ D. Physical Layer ○ E. Network Layer  QUESTION 20	2 points
<ul> <li>B. All layers</li> <li>C. Application Layer</li> <li>D. Physical Layer</li> <li>E. Network Layer</li> </ul> QUESTION 20 ICMP is a part of Data Link Layer	2 points
○ B. All layers ○ C. Application Layer ○ D. Physical Layer ○ E. Network Layer  QUESTION 20	2 points
<ul> <li>B. All layers</li> <li>C. Application Layer</li> <li>D. Physical Layer</li> <li>E. Network Layer</li> </ul> QUESTION 20 ICMP is a part of Data Link Layer <ul> <li>True</li> </ul>	2 points
<ul> <li>B. All layers</li> <li>C. Application Layer</li> <li>D. Physical Layer</li> <li>E. Network Layer</li> </ul> QUESTION 20 ICMP is a part of Data Link Layer <ul> <li>True</li> </ul>	2 points 2
<ul> <li>B. All layers</li> <li>C. Application Layer</li> <li>D. Physical Layer</li> <li>E. Network Layer</li> </ul> QUESTION 20 ICMP is a part of Data Link Layer <ul> <li>True</li> <li>False</li> </ul> QUESTION 21 Subnetworking is used for building smaller networks from larger networks	
© B. All layers  © C. Application Layer  © D. Physical Layer  © E. Network Layer   QUESTION 20  ICMP is a part of Data Link Layer  ○ True  © False	

	2 points
Stop-and-wait protocols are faster than pipelined protocols	
○ True	
False	
QUESTION 23	a material and
	2 points
Maximum size of an IP header is 60 bytes	
© True	
○ False	
QUESTION 24	2 points
Data Link Layer is just below the Transport layer in the TCP/IP protocol suite	
O True	
False	
QUESTION 25	2 points
The IP address 155.150.40.100 belongs to a class C network	
True	
False	
QUESTION 26	10 points
Assume you have the generator polynomial $G(x) = x^3 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC)	10 points
Assume you have the generator polynomial $G(x) = x^3 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?	10 points
Assume you have the generator polynomial $G(x) = x^3 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?	10 points
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 1011011010101011  2. 1001011010101111	10 points
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1.10110110101010101  2.1001011010101111  3.1001011010111101	10 points
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 101101101010101  2. 100101101010111	10 points
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1.10110110101010101  2.1001011010101111  3.1001011010111101	10 points
Assume you have the generator polynomial G(x) = x <sup>3</sup> +x <sup>2</sup> +1 and the message to be sent as M(x) = x <sup>10</sup> +x <sup>7</sup> +x <sup>5</sup> +x <sup>4</sup> +x <sup>2</sup> +1. Find the Cyclic Redundancy Check (CRC) value and the final message T(x) to transmit. What is your result for T(x)?  □ 1.101101101010101  □ 2.10010110101111  □ 3.10010110101011  ■ 4.100101101010101  QUESTION 27	
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 101101101010101  2. 10010110101111  3. 100101101010101  4. 100101101010101  QUESTION 27  IP is a connectionless protocol	
Assume you have the generator polynomial G(x) = x <sup>3</sup> +x <sup>2</sup> +1 and the message to be sent as M(x) = x <sup>10</sup> +x <sup>7</sup> +x <sup>5</sup> +x <sup>4</sup> +x <sup>2</sup> +1. Find the Cyclic Redundancy Check (CRC) value and the final message T(x) to transmit. What is your result for T(x)?  □ 1.101101101010101  □ 2.10010110101111  □ 3.10010110101011  ■ 4.100101101010101  QUESTION 27	
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 1.01101101010101  2. 1.0010110101111  3. 1.00101101010101  4. 1.00101101010101  QUESTION 27  IP is a connectionless protocol	
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 1.01101101010101  2. 1.0010110101111  3. 1.00101101010101  4. 1.00101101010101  QUESTION 27  IP is a connectionless protocol	
Assume you have the generator polynomial $G(x) = x^2 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 1.01101101010101  2. 1.00101101010111  3. 1.00101101010101  4. 1.00101101010101  QUESTION 27  IP is a connectionless protocol  True  False	2 points
Assume you have the generator polynomial $G(x) = x^3 + x^2 + 1$ and the message to be sent as $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message $T(x)$ to transmit. What is your result for $T(x)$ ?  1. 1.01101101010101  2. 1.0010110101111  3. 1.0010110101011  4. 1.00101101010101  QUESTION 27  IP is a connectionless protocol  True  False	2 points
Assume you have the generator polynomial G(x) = x <sup>3</sup> +x <sup>2</sup> +1 and the message to be sent as M(x) = x <sup>10</sup> +x <sup>7</sup> +x <sup>5</sup> +x <sup>4</sup> +x <sup>2</sup> +1. Find the Cyclic Redundancy Check (CRC) value and the final message T(x) to transmit. What is your result for T(x)?  □ 1.101101101010101  □ 2.100101101010111  □ 3.10010110101011  ■ 4.100101101010101  QUESTION 27  IP is a connectionless protocol  ● True  □ False  QUESTION 28  TCP header contains ACK FIN SYN URG flags	2 points

## Results

Question 1  Applications use connection-oriented protocol for faster data delivery	2 out of 2 points
Question 2  The principle characteristics of connectionless service are	10 out of 10 points
Question 3  Fragmentation is used to regulate MTU	2 out of 2 points
Question 4  Go-Back-N is a type of piplined protocol designed for reliable data transport	2 out of 2 points
Question 5  TCP uses multiplexing/demultiplexing, since UDP must work faster it does not use multiplexing/demultiplexing,	2 out of 2 points
Question 6  TCP header contains fragment ID	2 out of 2 points
Question 7  Before the data transmission UDP establishes connection with destination host.	2 out of 2 points

Question 8  IEEE defines the maximum transferable unit (MTU) size as 1400 bytes	2 out of 2 points
Question 9  TCP Uses port numbers to specify destination and source hosts	2 out of 2 points
Question 10  UDP is much faster than the TCP	2 out of 2 points
Question 11  TCP uses 16-bit sequence numbers for identifying TCP segments	2 out of 2 points
Question 12  TCP uses ACKs for verifying the receipt of packets	2 out of 2 points
Question 13  UDP is residing in the same layer as of DHCP	0 out of 2 points
Question 14  The IP checksum includes the TTL	0 out of 2 points
Question 15  UDP has no SYN and ACK flags	2 out of 2 points
Question 16  Length of the IP fragment offset is 13 bytes	0 out of 2 points
Question 17  IP uses TTL for limiting packets lifetime through Internet	2 out of 2 points
Question 18  UDP uses Polynomial Checksum for detecting multiple bit errors	2 out of 2 points
Question 19  Flow control is the mechanism to regulate the flow of data, so that a fast host cannot overrun a slow one. This is the function of the following TCP/IP Layer	10 out of 10 points
Question 20 ICMP is a part of Data Link Layer	2 out of 2 points
Question 21  Subnetworking is used for building smaller networks from larger networks	2 out of 2 points

Stop-and-wait protocols are faster than pipelined protocols Question 23 2 out of 2 points Maximum size of an IP header is 60 bytes Question 24 2 out of 2 points Data Link Layer is just below the Transport layer in the TCP/IP protocol suite Question 25 2 out of 2 points The IP address 155.150.40.100 belongs to a class C network Question 26 Assume you have the generator polynomial  $G(x) = x^3 + x^2 + 1$  and the message to be sent as  $M(x) = x^{10} + x^7 + x^5 + x^4 + x^2 + 1$ . Find the Cyclic Redundancy Check (CRC) value and the final message T(x) to transmit. What is your result for T(x)? Question 27 2 out of 2 points IP is a connectionless protocol Question 28 2 out of 2 points TCP header contains ACK|FIN|SYN|URG flags Question 29 2 out of 2 points DHCP stands for "Dynamic Hosta Categorization Protocol" Question 30 2 out of 2 points Every protocol layer provides service to its upper layer protocol Question 31 10 out of 10 points Answer the following multiple choice questions for a datagram-oriented packet-transmission Question 32 2 out of 2 points TCP is not a reliable transport protocol Question 33 2 out of 2 points X= (L/R)/(L/R)+RTT, here X denotes the speed of a connection.

2 out of 2 points

0 out of 2 points

The result of a Boolean AND operation between IP address 150.150.4.100 and subnetmask 255.255.192.0 is

1001 0110 1001 0110 0000 0000 0000 0000

Question 34
