Def 1: Consider a linear system

$$A_{m \times n} x = b$$

Then the augmented matrix of the system is another matrix of the size  $m \times (n+1)$  given by  $[A|b]$

for example augmented matrix of system (1) is

$$\left[ \begin{array}{ccc|c} 2 & -1 & 3 & 1 \\ -1 & 2 & -1 & -1 \\ 1 & 3 & -2 & 0 \end{array} \right] \begin{matrix} (1) \\ (2) \\ (3) \end{matrix}$$

f.e. write the system corresponding to

$$\begin{cases} 2x - y + 3z = 1 \\ -x + 2y - z = -1 \\ x + 3y - 2z = 0 \end{cases}$$

There are 3 rows  $\Rightarrow$  3 eqns  
There must be 3 unknowns  
so  $x, y, z$

$$\begin{matrix} 1^{st} \text{ row:} & 2x - y + 3z = 1 \\ 2^{nd} \text{ row:} & -x + 2y - z = -1 \\ 3^{rd} \text{ row:} & x + 3y - 2z = 0 \end{matrix}$$

Elementary row operations

- ① Scaling: We can multiply any row with a constant
- ② Interchanging: we can interchange any two rows whatever we want
- ③ Replacement: We can multiply a row with a constant and add it to another row.

f.e. Write the augmented matrix for the system and apply row operations to generate a simple equivalent system

$$\begin{matrix} 2x - y + 3z - w = 1 \\ x - y + z - 2w = 2 \\ -x + 2y - 2z - 3w = 6 \end{matrix}$$

Try not change the order

f.e. write the system corresponding to

$$\begin{bmatrix} 2 & 0 & -1 & 1 \\ 0 & 2 & 3 & 4 \\ 0 & 0 & 2 & 7 \end{bmatrix}$$

There are 3 rows  $\Rightarrow$  3 eqns

① In order to span  $\mathbb{R}^n$ , we exactly need  $n$  vectors from  $\mathbb{R}^n$  F

Corrected: In order to span  $\mathbb{R}^n$ , we need at least  $n$  vectors from  $\mathbb{R}^n$

② Suppose that the square matrix  $A$  has  $n$  leading entries. Then, its columns span  $\mathbb{R}^n$  T

③ Suppose that the columns of the matrix  $A$  span  $\mathbb{R}^n$ . Then  $Ax=b$  has unique sol  $F \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$

④ Suppose that  $\vec{u} \in \text{span}\{v_1, v_2, v_3\}$

Then  $\text{span}\{u, v_1, v_2, v_3\} \neq \text{span}\{v_1, v_2, v_3\}$

PROPERTIES OF THE MATRIX-VECTOR PRODUCT

Theorem 5: If  $A$  is an  $m \times n$  matrix,  $u$  and  $v$  are vectors in  $\mathbb{R}^n$ , and  $c$  is a scalar, then

a.  $A(u+v) = Au + Av$

b.  $A(cu) = c(Au)$

\* Proof: For simplicity, take  $n=3$ ,  $A = \begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{bmatrix}$  and  $u, v$  in  $\mathbb{R}^3$ .  
 For  $i=1, 2, 3$ , let  $u_i$  and  $v_i$  be the  $i$ th entries in  $u$  and  $v$ , respectively.
